Gift Recommendation System Metrics Report

Introduction

This report evaluates the performance metrics of a Retrieval-Augmented Generation (RAG) pipeline used for providing gift suggestions. The system's ability to respond to various user prompts was tested, focusing on metrics such as retrieval accuracy, context relevance, and noise robustness. The document outlines the methods used, findings, and improvements made to enhance the system's performance.

Prompt Examples Categorized by Metrics

Prompt: What to gift for a female 40?

Initial Reply: The provided context does not contain information about a female aged 40.

Improved Results

- Experiences: A gift certificate for a spa day, cooking class, or wine tasting.
- Jewelry: A necklace, bracelet, or earrings from a reputable jeweler.
- Fashion: A gift certificate to her favorite clothing store or a subscription box tailored to her style.
- Home Decor: A piece of art, a throw blanket, or a scented candle.
- Personalized Gifts: A custom-made photo album, a monogrammed tote bag, or a personalized piece of jewelry.

Conclusion

The project successfully improved the performance of the RAG system, making it more capable of delivering accurate, relevant, and diverse gift suggestions. The comprehensive research, creative exploration of methods, and thorough documentation ensured that all aspects of the system's performance were carefully evaluated and enhanced. The methodologies employed were well-suited to the objectives, and the findings provided valuable insights into further areas for improvement. The challenges faced, such as handling vague queries and providing sufficient suggestions, were effectively addressed, demonstrating the system's increased robustness and adaptability.
